Emergency Dependency Resolution - July 25, 2025

BMAD Agent Orchestration Mission: COMPLETE V

Critical Issue Resolved

ERESOLVE Dependency Conflict that was preventing Vercel builds from completing due to incompatible @auth/core versions.

Root Cause Analysis

- next-auth@4.24.11 expected @auth/core@0.34.2 as peer dependency
- @auth/core@0.40.0 was installed for security fixes
- @next-auth/prisma-adapter@1.0.7 only supported next-auth v4
- This created an irreconcilable dependency conflict

Solution Implemented

Systematic Migration to Auth.js v5 Ecosystem:

- 1. **Upgraded next-auth**: 4.24.11 → 5.0.0-beta.29
 - Includes @auth/core@0.40.0 as bundled dependency (not peer)
 - Eliminates version conflict completely

2. Removed conflicting packages:

- Removed explicit @auth/core@0.40.0 dependency (now bundled)
- Removed @next-auth/prisma-adapter@1.0.7 (v4 only)
- Kept @auth/prisma-adapter@2.10.0 (modern replacement)

3. Migrated to Auth.js v5 pattern:

- Created centralized auth.ts configuration file
- Updated API route to use new handlers export
- Replaced all getServerSession(authOptions) calls with auth()
- Fixed imports across 7 API route files

Security Validation 🔽

- O vulnerabilities maintained (confirmed via npm audit)
- All security fixes from @auth/core@0.40.0 preserved
- · No new security issues introduced

Build & Test Validation 🔽

- Build successful: npm run build completes without errors/warnings
- 100% test success rate: All tests passing (3 test suites, multiple test cases)
- Ray Peat bioenergetics functionality: Fully preserved and operational
- Memory-enhanced health analysis: All systems functional

Deployment Status

• Local build: V Successful

- **Git commit**: V Pushed to 100-percent-test-success branch (commit: 940be2c)
- Vercel deployment: Pending verification (may need branch configuration)

Files Modified

```
package.json
                                               # Updated dependencies
                                               # Regenerated with new versions
package-lock.json
auth.ts
                                              # New centralized auth config

                                              # Updated auth imports
                                              # Updated auth imports
app/api/memory/preferences/route.ts
app/api/memory/trends/route.ts
                                               # Updated auth imports
```

Key Dependencies After Resolution

```
{
  "next-auth": "^5.0.0-beta.29",
  "@auth/prisma-adapter": "^2.10.0"
}
```

Mission Outcome: SUCCESS 🎉

- Critical dependency conflict resolved
- V Security vulnerabilities remain at 0
- W Build process fully restored
- All functionality preserved
- 100% test success rate maintained
- Ray Peat bioenergetics systems operational

Emergency deployment capability restored. Production builds can now proceed without ERESOLVE conflicts.
